

Why am I seeing an error on my calculated field?

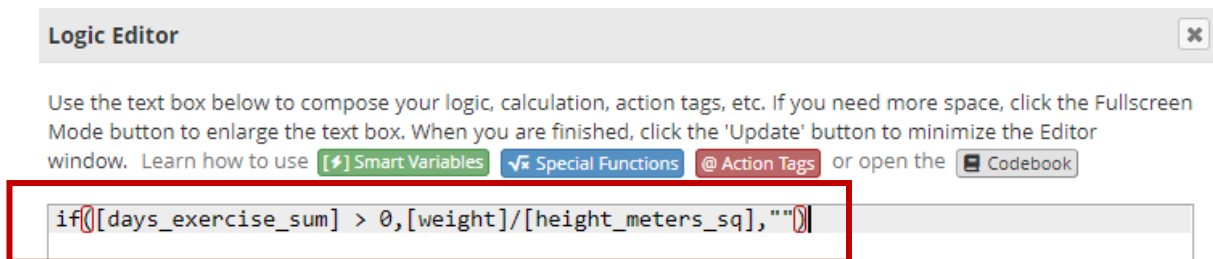

To learn how to create calculated fields, please refer to [FAQ: CALCULATED FIELD](#).

When using branching logic to hide calculated fields, you may come across the following error:

To resolve this branding logic error, you will need to add conditional logic to your calculation. Using the **Designer** in the left navigation menu, open the field with the error message to add conditional logic using the 'if' function. The 'if' function has the syntax if (x,y,z), where if x is true, then y, else z.

In this example, we are calculating Body Mass Index (BMI) for patients who exercise at least 1 day a week. If they do not exercise at least once a week, no calculation will be performed. The 'if' function below will only calculate BMI when [days_exercise_sum] > 0.

The conditional logic within the 'If' function mimics the branching logic and resolves the resulting error.
